

Sean is a busy guy with a lot going on all day.

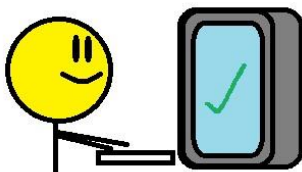

Sean is taking 5 online courses at once, and each one handles assignments differently.

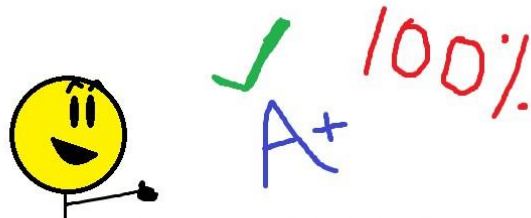

Eventually, Sean was worried about missing assignments in class just from not being able to keep up with it all.

That's when Sean learned from a friend of his about an all new app that could keep track of all your classes at once on a single organized service

Later that day, Sean tried out the new tool and found that it was very easy to set up.

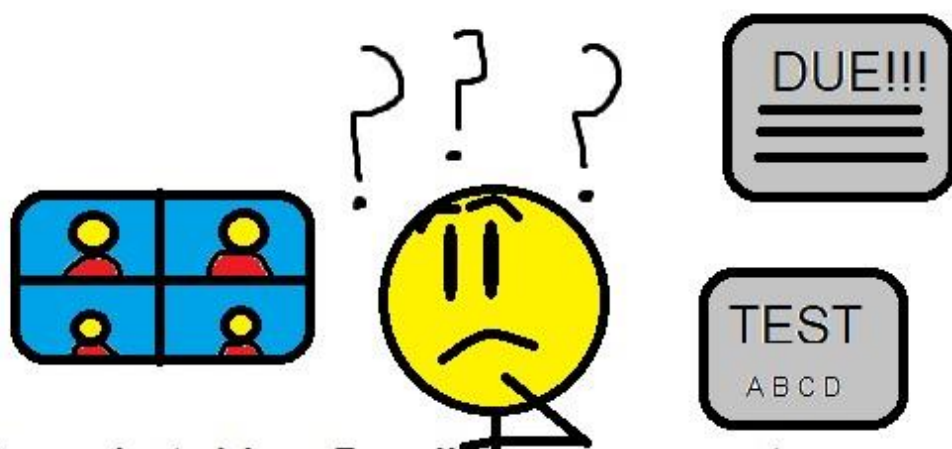

Now Sean can keep up with all his classwork perfectly fine, thanks to this excellent new app!

Brian Grove

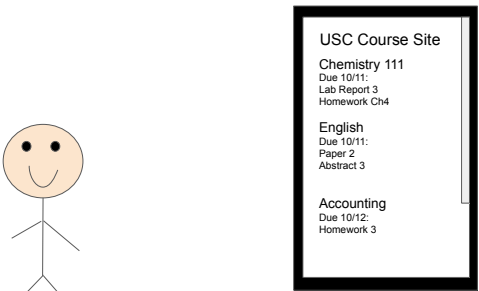

David Atkins is a sophomore at the University of South Carolina who is studying sports management. When he is not in class he is playing football to practice for upcoming games with his intramural sports team. However, David has a lot of assignments due and needs to stay on top of them.

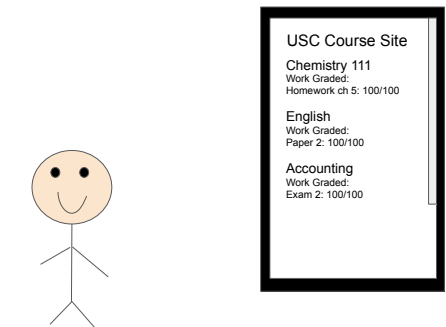

David is doing really well in his classes so far. He is taking a chemistry class and has homework due on a different platform from blackboard. The platform is called Sapling and he only uses for it one class.

Due to David having to use multiple platforms to complete and turn in assignments it makes keeping track of the assignments difficult. David has missed multiple homework assignments in his chemistry class. If only he had a platform that showed him every assignment due from all of his classes.

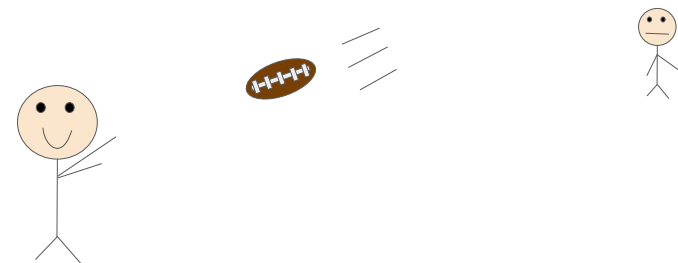

David receives an email from the Student Success center that tells him of a new website developed by University of South Carolina students. This site tells David all of the assignments he has due from all of his classes. It also provides a calendar just like Blackboard that displays the due dates.

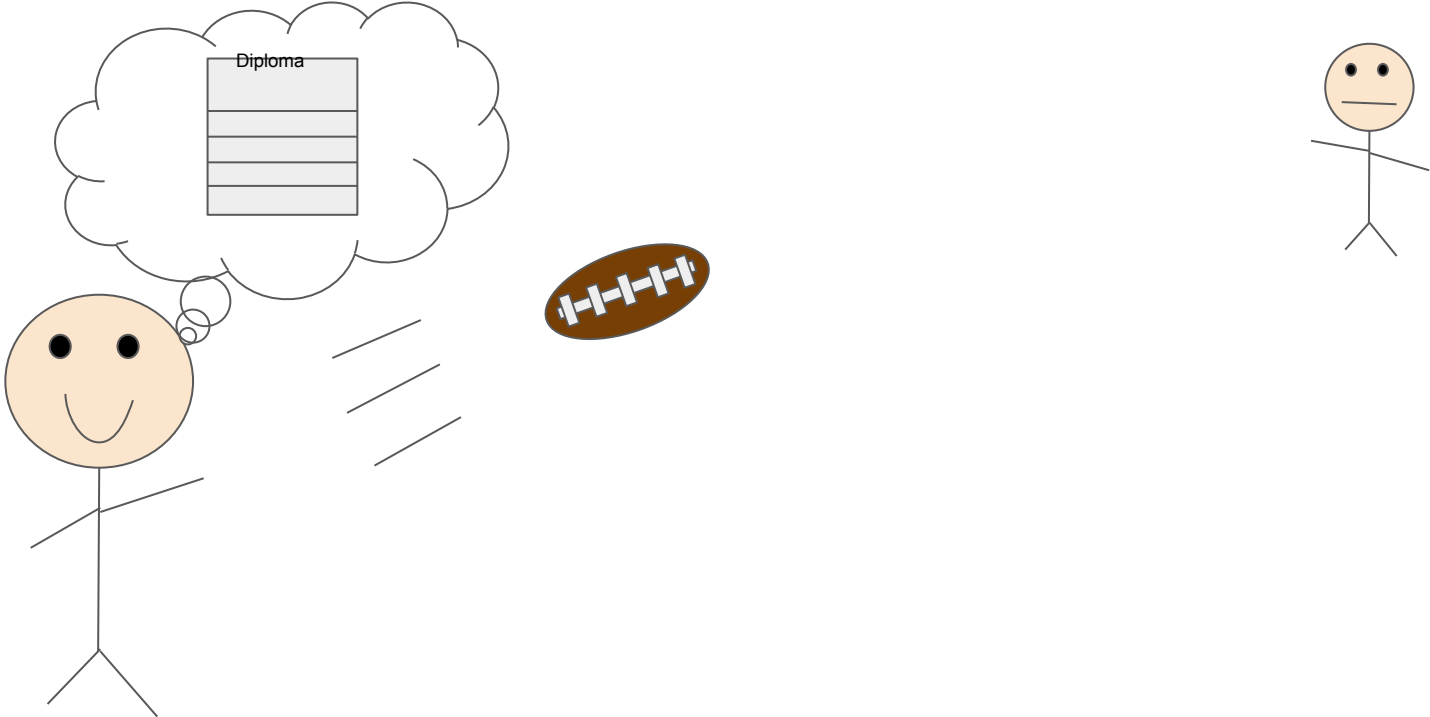

David is now aware of everything that is due and as a result is not making zeros on missed assignments. He can rest easy now knowing that all his assignments will be uploaded to this new platform.

Brian Grove

Now with a new tool at his disposal to stay on top of his classes, David can enjoy his free time knowing he won't miss a single assignment.

It is the first day of Junior year of college for Charlotte Webster. She goes into class with great anticipation and excitement for the year to come. As usual, much of the first day is going over the syllabus. At the end of the day she notices that she has different websites for the work for different classes. She logs in to all of them, but it is a lot to try and figure out, especially with everything going on at the beginning of the year.

As Charlotte gets further into her classes, the work starts to pile higher and higher. She starts to feel overwhelmed by all of the work. She checks BlackBoard for her assignments and completes those. She makes it through the week and checks her grades. O! She didn't even see the assignment! It was on MyLab Math. She completely forgot to check there. Now she is even more stressed and doesn't know what to do.

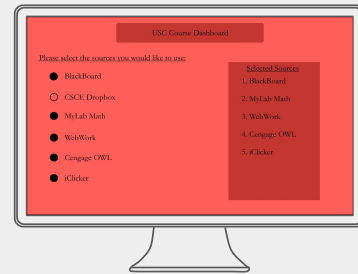

Lily! What do I do? I completely missed one of my assignments the other day because I forgot to check My Math Lab

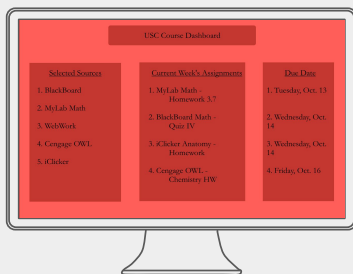

Oh, I have just the thing! It's a life-saver. Some CS nerds made a website that shows you all of your assignments. I'll send it to you, you should check it out!

Charlotte was talking with her friend Lily and told her what had happened with her missed assignment. Lily told Charlotte about a new app taking UofSC by storm that is exactly what she is looking for. What a coincidence! She immediately downloads it to check it out.

Charlotte gets home and pulls up the website. She is amazed at how easy it is to use! She starts off by selecting the platforms that her assignments for the semester will be posted on.

Charlotte hit enter to confirm the sources she wanted to draw from and logged in to each service. After some techno-wizardry, the website gave her a week view of all of the assignments she has for the week! That was exactly what she was looking for! She cries tears of joy as she gazes at the screen of her Macbook Pro, sipping on her Starbucks iced latte.

Charlotte Web Grade Report

1. Anatomy - 99%
2. Chemistry - 98%
3. Math - 100%

I didn't miss a single assignment thanks to USC Course Dashboard! Thanks Team Indian Apple!

And now, Charlotte Webster has reached the end of her first semester of Junior year. It was a little shaky there in the beginning, but thanks to the geniuses in Team Indian Apple, she made it through. She was able to track her assignments just the way she wanted, and she was always on top of her assignments with the peace of mind she received from using the USC Course Dashboard. It is truly revolutionary.

Bryan is a manager at his large executive firm, with a large team of diverse employees and a staff of 6. He also has a family of 4 at home is in need of an app that can both help him manage his work-life balance.

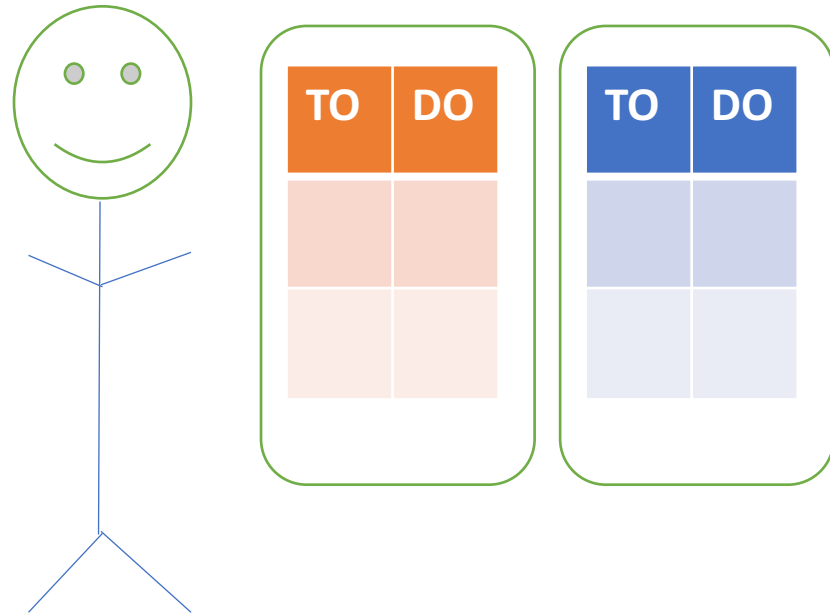

William Hobbs

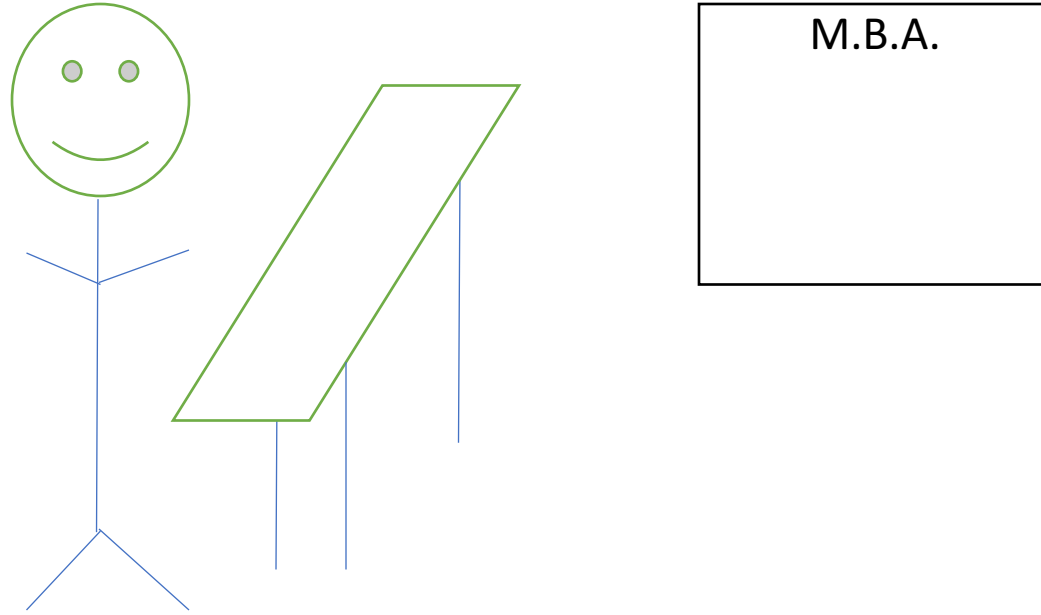

As the manager of this large team, Bryan is in need of a method through which to synchronize the assignments the team has currently pending. Team Indian Apple's application allows him to do just that.

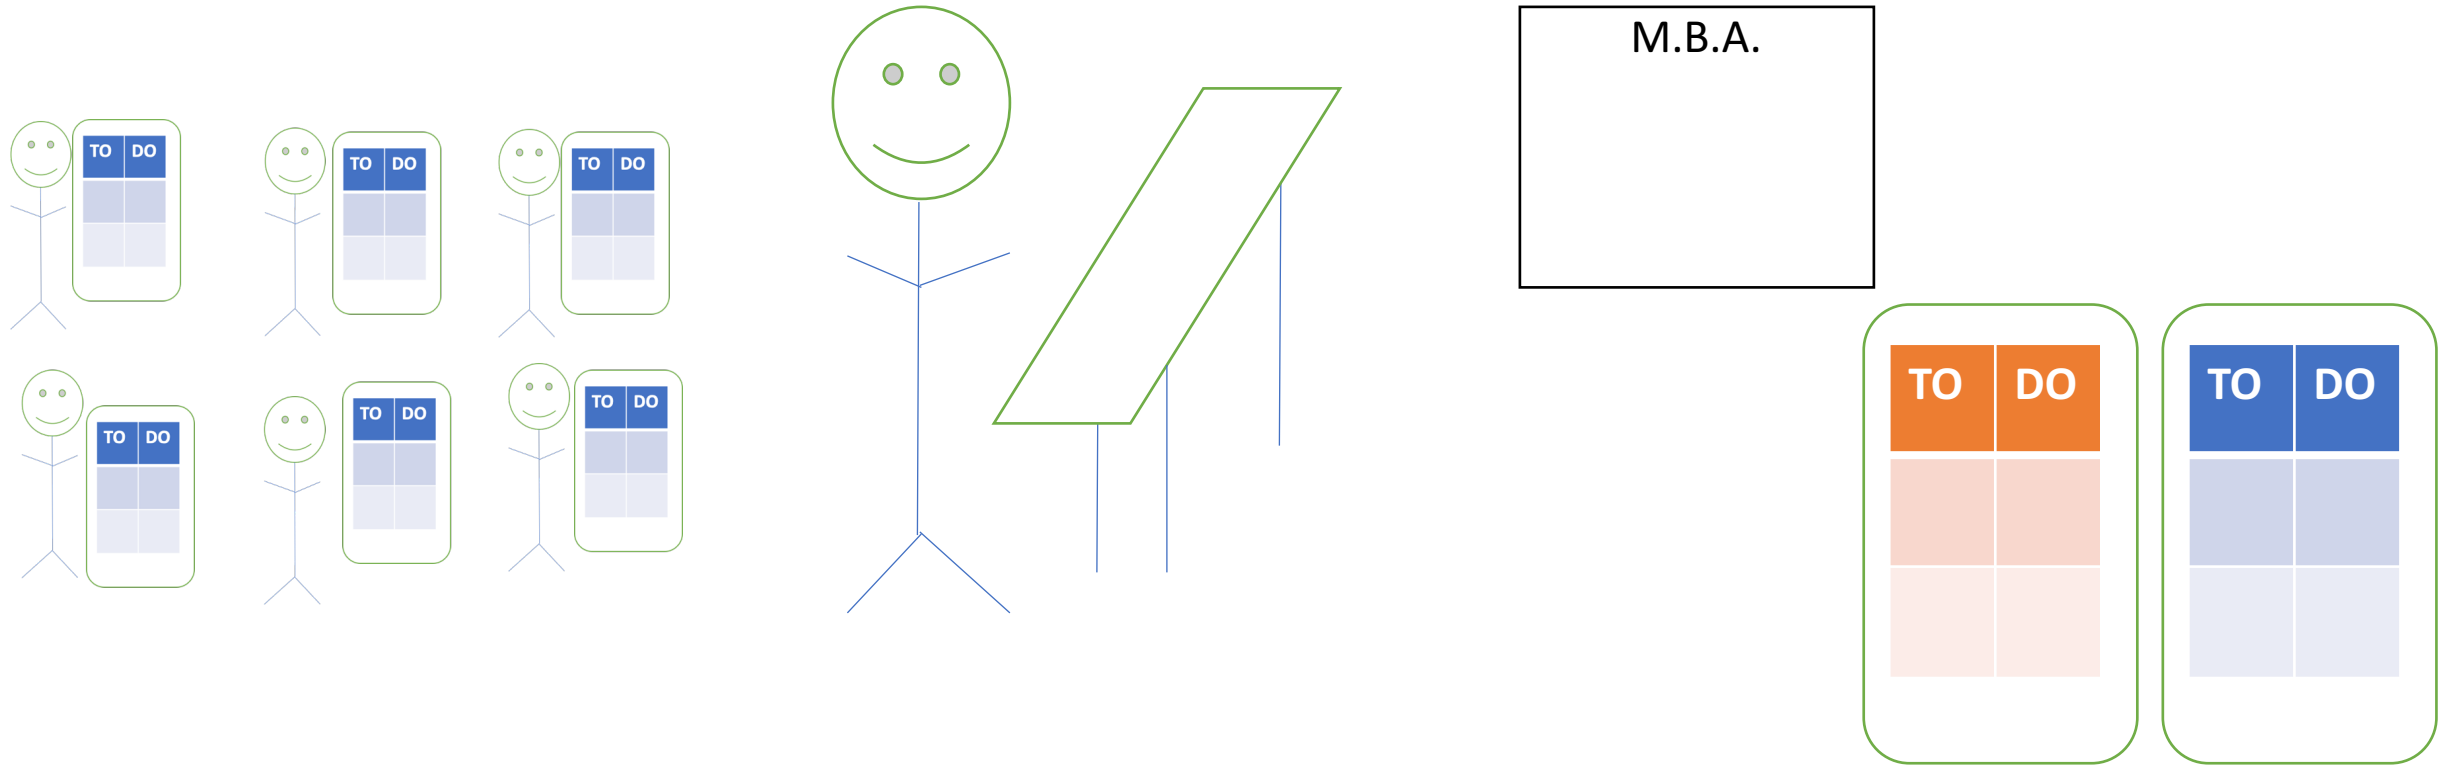

However, Bryan also has decided to take on an Executive MBA program at a local University. He needs to have access to private lists to keep track of his assignments, which the app from Team Indian Apple allows him to do.

As the semester progresses, the application helps him navigate the courses that he has as well as the work that he has to do for school. This allows him to seamlessly manage both is work and personal lives.

Bryan is able to complete his M.B.A. alongside his job thanks to the application support developed by Team Indian Apple.

Even after his program concludes, Bryan keeps the application for work as well as for historical reference of the tasks he completed.

William Hobbs
