Team Indian Apple Problem Statement

Authors: Brian Grove, Daniel Gleaves, Evan Grune, William Hobbs

Problem Statement:

University of South Carolina students are struggling to manage their coursework that UofSC has spread across different platforms between different departments. Our solution would provide the user with a simple, one-stop location for them to be able to track and submit work for all of their classes across every department within the university.

The Four W's:

1. **Who is experiencing the problem?**

   a. University of South Carolina students with work spread across multiple platforms are experiencing this problem.

2. **What is the Problem?**

   a. Course assignments' due dates and submission locations are spread across multiple platforms and not in a standard location for all classes across all departments.

3. **Where does the problem present itself?**

   a. The problem presents itself when a student misses a deadline for an assignment because of the difficulty in keeping up with the different course websites.

4. **Why does it matter?**

   a. Limited knowledge of assignment due dates and other important events can limit a student's academic success.
